

An Alkaline Pre-Spray for Oil and Water based Soil on Carpeted Areas

Pre-Spray Treatment is the ideal pre-spray treatment for heavily soiled areas. Its unique formulation makes it most effective for use on both oil and water spots, stains and soil. Pre-Spray has been proven by professional carpet cleaners for many years. Pre-Spray will speed up any cleaning method by attacking the hard to remove soil from heavily trafficked areas. It may also be added to your cleaning solution by spraying the diluted product on the carpet first, and letting set for 10 to 15 minutes (do not allow to dry). The dwell time will improve its effectiveness.

DIRECTIONS: Shake well before using. Test fabric in inconspicuous place for color fastness before using.

1. Dilute 6-8 oz. (180-240 mL) of Pre-Spray to 1 gallon (3.78 L) of water.
2. Spray heavily soiled areas using a sprayer or an airless pressure sprayer. Use a medium to coarse spray, never a mist or fogger.
3. Agitate into carpet with a carpet rake.
4. Allow to dwell in carpet for 10-20 minutes to help break down dirt. Do not allow to dry to carpet fibers.
5. Proceed to clean the carpet in the usual manner.

NOTE: A mist filter mask should be worn during spray applications.

NOTE: Freezing will not affect cleaning power. Thaw, shake well and use.
